S1880-1

CRIME IN GEORGIA

prepared by the
Georgia Criminal Justice Coordinating Council

Office of the Governor

Atlanta, Georgia 30334

George Busbee
GOVERNOR

My Fellow Georgians:

Almost every citizen of Georgia has or will come in direct contact with crime. Every day the number of Georgians who have become crime victims grows larger; those not themselves victims will have friends or relatives who are victimized. Even those not personally touched by crime will read in newspapers, view on television, or hear on radio reports of crime and its victims. Crime, daily, has some impact on most Georgians.

Reliable, accurate statistics identifying the nature and extent of the crime problem in this State are essential if the various components of the criminal justice system are to work together to reduce crime and its devastating effect upon our citizens. These same statistics are essential for the Governor, the Legislature, local governments, and involved private organizations to arrive at decisions concerning resources, methods, and responses to the crime problem.

Crime in Georgia is one of the Criminal Justice Coordinating Council's efforts to assist decision makers in improving the operation of the criminal justice system and in reducing crime. Through this publication's use, more informed decisions can be made, which can have the positive impact of reducing crime and victimization rates. I hope you will find it informative and that you will use it in pursuit of our mutual goal, the reduction of crime and improved safety of our citizens.

Sincerely,

George Busbee

Office of the Governor

Criminal Justice Coordinating Council

7 Martin Luther King Drive, S.W., Suite 145, Atlanta, GA 30334

The Georgia Criminal Justice Coordinating Council wishes to express its appreciation to Tom McGreevy, director, Georgia Crime Information Center, and staff members Bill Holland, and Mary Foster; to Ann Blum, Emily Honigberg, Reid McCallister, Debra Peters, Celeste Taylor, and Elinid Apostolik of the Institute of Government for their help in preparing this document. Their assistance is gratefully acknowledged.

INTRODUCTION

Georgia's crime reporting system is patterned after that of the Federal Bureau of Investigation. It is principally designed to collect two types of crime data from local law enforcement agencies according to standardized definitions and procedures. The first type of data—reported offenses—includes counts for the crimes of murder and non-negligent manslaughter, forcible rape, robbery, aggravated assault, burglary, larceny-theft, motor vehicle theft, and arson. The first four offenses are termed violent crimes or crimes against persons; the remaining four are termed property crimes. Because of their seriousness, frequency of occurrence, and likelihood of being reported, these crimes are thought of as forming an index of the crime problem, and consequently these Part I offenses are known as Index crimes. Counts for less serious crimes, designated Part II crimes, are also collected. The second type of data—arrest statistics—can be used to measure law enforcement activity in addition to identifying some of the characteristics of the criminal population.

The Georgia Crime Information Center, which is responsible for administering the state's crime reporting system, collects, edits, and aggregates the crime reports submitted by almost all of the local law enforcement agencies in Georgia, producing a uniform, comprehensive data base. This information, in turn, is routed to the FBI for inclusion in the national Uniform Crime Reporting Program and to the Georgia Criminal Justice Coordinating Council for use in report preparation, policy analysis, and other research activities.

The data provided in this report relative to Georgia crime statistics is comprised of actual reports on file with the Georgia Crime Information Center. The FBI provides statistical data on criminal activity on a nationwide basis. Those tables comparing criminal activity in Georgia with that of the South and the nation are based on FBI statistical data.

DATA INTERPRETATION

Several cautions in interpreting the crime data produced by this system must be observed. First, it is well established that many more crimes occur than are ever reported. Thus, depending on the type of crime and type of victim, statistics based on the number of crimes reported to law enforcement agencies may seriously underestimate the number of crimes that actually take place. By extension, because the size and variation of this "hidden figure of crime" are not known, it cannot be said that changes in reported crime necessarily reflect commensurate changes in criminal behavior.

Second, the Georgia Crime Information Center does not include estimates for arrests that take place but are not reported. Again, changes in the number of reported arrests may not necessarily reflect the actual level of change in law enforcement activity. Also, there is evidence that changes in the actual number of crimes committed normally coincide with changes in population. Accordingly, historical comparisons of the number of crimes reported may be misleading if the accompanying changes in population are not considered. The same is true for inter-jurisdictional comparisons; it is expected that different populations have different levels of crime. The use of crime rates in making comparisons minimized these problems. Finally, from the same logic, because crime rates are a function of the number of persons affected, as well as the number of crimes reported, they are only as accurate as are population estimates.

Still, because of its uniformity and comprehensiveness, the state's crime statistics data base, particularly for 1977 and subsequent years when law enforcement agencies' reporting is more valid and reliable, is very useful for describing Georgia's crime problem over time and in making comparisons with other jurisdictions.

There was an attempt to include 1981 statistical crime profiles in addition to the 1980 data within this report. This was not feasible due to late reports currently being received and analyzed by the Georgia Crime Information Center. These 1981 late reports sometimes have statistically significant effects on earlier reported data (as much as a 9 percent difference in the numbers and rates).

The 1981 data, excluding late reports, are available at the Criminal Justice Coordinating Council. The more accurate 1981 crime profile will be available by late fall 1982.

TECHNIQUES OF DATA ANALYSIS

The analytic techniques used in preparing tables are discussed in the Appendix. The percentages and numbers in some tables do not add up to the total count due to rounding or missing data.

SUMMARY OF CRIME IN GEORGIA

INDEX CRIMES

In 1980, 293,778 Index crimes were reported to law enforcement agencies in Georgia. This total was an increase of 5.9 percent over 1979 and 22.9 percent over 1976. The rate of Index crimes for 1980 was 5,377.5 per 100,000 population, down .7 percent from 1979 and up 11.8 percent from 1976.

CRIMES AGAINST PERSONS

Georgians experienced 29,803 known violent crimes in 1980, including 782 murders, 2,513 forcible rapes, 10,884 robberies, and 15,624 aggravated assaults. This was an increase of 4.2 percent over the previous year and an increase of 41.7 percent compared with 1976. The rate of violent crime dropped 2.3 percent over 1979 and increased 28.9 percent over 1976. In 1980, 10.1 percent of Index crimes were those committed against people, an increase of 1.0 percent over 1979.

CRIMES AGAINST PROPERTY

A total of 263,975 property crimes were reported in 1980, up 6.1 percent from 1979 and 21.0 percent from 1976. The 88,328 burglaries, 154,567 larcenies, 19,891 motor vehicle thefts, and 1,189 arsons produced a .5 percent decrease in the property crime rate for 1980 over 1979, a 10.1 percent increase over the last five years. The vast majority of Index crimes involved the stealing of property.

ARRESTS

Law enforcement agencies made 50,356 arrests for Index crimes in 1980. Arrests in forcible rapes, aggravated assaults, burglary, and larceny were higher and arrests in murder, robbery, and motor vehicle theft were lower, producing an overall increase of 2.5 percent compared to 1979 and an increase of 52.7 percent over 1976's total. Arrest rates continued to be highest for males, 15 to 19 years of age.

Figure 1 depicts the total Index crime rates relative to the total Index crime arrest rates. Figure 2 shows the total property crime rates relative to the total property Index crime arrest rates. Figure 3 depicts the total violent Index crime rates relative to total violent Index crime arrest rates.

Section I
INDEX CRIMES: CHARACTERISTICS, TRENDS, COMPARISONS

PROFILE OF CRIME IN GEORGIA

In 1980, Georgians reported 293,778 Index crimes to law enforcement agencies (see Table 1). Included in this total were 782 murders, 2,513 forcible rapes, 10,884 robberies, 15,624 aggravated assaults, 88,328 burglaries, 154,567 larcenies, 19,891 motor vehicle thefts, and 1,189 arsons. Larcenies accounted for the highest percentage (52.6%) of the total number of Index crimes, and burglaries made up the second highest category (30.0%). Overall, 10.1 percent of the Index crimes were violent crimes committed against persons; the rest, 89.8 percent, were property offenses. Based on the Office of Planning and Budget's population report of 5,463,105, for each 100,000 persons in the state, 545.5 violent crimes and 4,831.9 property crimes were reported, producing an Index crime rate of 5,377.5. In addition to Part I Index crimes, a significant number of other crimes (known as Part II offenses) were reported by arrest, for a total of 238,672 additional crimes, including 16,135 assaults, 24,951 cases of fraud and forgeries, 3,455 sex offenses, 3,910 vandalisms, and 118,183 arrests for driving under the influence and drunkenness.

While counts for the eight Index crimes illustrate the magnitude of the problem, the nature of serious criminal behavior can be further identified by examining pertinent details of individual crimes (see Tables 2-9).

SUMMARY OF CRIME CHARACTERISTICS, 1980

The crimes of murder and aggravated assault typically involve people who know one another or have had some contact in the past (see Table 10). This is also often true for rapes. On the other hand, assuming that most of the unreported relationships between victims and of-

Table 1

PROFILE OF REPORTED INDEX CRIMES, GEORGIA, 1980

Type of Crime	Number Reported	Percentage of Total	Rate per 100,000

(Source: Georgia Crime Information Center; Office of Planning and Budget Population Report)

fenders are stranger-to-stranger, then robberies, burglaries, larcenies, and motor vehicle thefts are usually committed against persons unknown to the criminal.

Firearms were used in 39.8 percent of the violent crimes against persons, making them the most frequently used type of weapon. The remaining weapon types were used less frequently: cutting tools, 17.6 percent; hands and fists, 19.4 percent; and other dangerous instrumentalities, 21.0 percent.

In 1980, $192,343,619 in property was reported stolen during the commission of Index crimes. Motor vehicle thefts accounted for the greatest loss, $72,750,965, followed by burglaries, $62,604,594, larcenies, $50,065,727 and robberies, $6,461,673. The average value of property stolen during a motor vehicle theft was $3,657, compared to $593 taken during a robbery, $708 during a burglary, and $323 during a larceny.

Generally, with the exception of robbery, most Index crimes occurred in residences or public places.

Table 2

MURDER AND NON-NEGLIGENT MANSLAUGHTER

DEFINITION

Murder and non-negligent manslaughter are defined as the willful killing of one human being by another. Deaths caused by negligence, suicide, accident, or justifiable homicide are not included in the count for this offense classification. Attempts to murder or assaults to murder are scored as aggravated assaults and not as murder.

Table 3

FORCIBLE RAPE

DEFINITION

Forcible rape is the carnal knowledge of a female forcibly and against her will. This category includes assaults or attempts to commit forcible rape by force or threat of force, but not statutory rape (without force) and other sex offenses.

Table 5

AGGRAVATED ASSAULT

DEFINITION

Aggravated assault is the unlawful attack by one person upon another for the purpose of inflicting severe bodily injury. This type of assault is usually accompanied by the use of a weapon or other means likely to produce death or serious bodily harm. Attempts are included since it is not necessary that an injury result when a gun, knife, or other weapon is used which could and probably would result in serious personal injury if the crime is successfully completed.

Table 7

LARCENY

DEFINITION

Larceny is the unlawful taking, carrying, leading, or riding away of property from the possession or constructive possession of another. It includes crimes such as shoplifting, pocket-picking, purse-snatching, thefts from motor vehicles, thefts of motor vehicle parts and accessories, bicycle thefts, etc., in which no use of force, violence, or fraud occurs.

MOTOR VEHICLE THEFT

DEFINITION

Motor vehicle theft is defined as the theft or attempted theft of a motor vehicle. This definition excludes taking for temporary use by those persons having lawful access to the vehicle.

Table 9

ARSON*

DEFINITION

Arson is defined as any willful or malicious burning or attempt to burn, with or without intent to defraud, a dwelling house, public building, motor vehicle or aircraft, personal property of another, etc.

Only fires determined through investigation to have been willfully or maliciously set are classified as arsons. Fires of suspicious or unknown origins are excluded.

GEOGRAPHICAL DISTRIBUTION OF CRIME

In 1980 persons living in Standard Metropolitan Statistical Areas (SMSAs), which are geographical subdivisions composed of a core city with over 50,000 population and its surrounding counties, experienced the highest crime rates in the state for all categories of Index crimes. Another geographical subdivision, Non-SMSAs/Urban, which consists of those counties containing within their geographical boundaries a core city or cities with between 15,000 and 50,000 population, had crime rates approximately one-half those of the SMSAs. Rural Areas, which are those counties containing a city or cities with under 15,000 population, had the lowest crime rates in all categories except murder, which exceeded the rate for SMSAs.

As the geographical patterns appear to indicate in Figure 4 and Table 11, an increase in the number and rates of Index crimes, with the exception of murder, is proportionate to an increase in the density of population. No attempt to compare Table 11 (1980) *Crime in Georgia* with Table 10 (1979) *Crime in Georgia* should be made. Minor changes in the Georgia Crime Information Center data storage resulted in 19 changes in the definitions of each geographical category in order to report an accurate geographical distribution of crime for 1980.

CRIME TRENDS AND COMPARISONS

Yearly changes in the total number and rate of Index crimes were highly variable during the period 1976-1980, ranging from an increase of almost 15 percent to a decrease of over 10 percent. This high degree of variability is even more apparent when individual Index crimes are examined, so that it is difficult to identify trends or make predictions. Generally though, both the number of crimes and the crime rate have been increasing, but at a slower rate. Absolute decreases were shown in 1977 as compared with 1976 and a slowed down rate of increase in 1980 as compared with 1979. There was a definite decrease from 1979 in the number of reported crimes and the crime rate for murder in 1980. In contrast, forcible rape increased more than any other Index crime in 1980 over 1979, in both the number reported and crime rates. Although Georgia experienced a significant increase in reported crime

and crime rates in 1978 and 1979, the increases are not unprecedented; in the past ten years, they have been exceeded twice. The pattern of change in the number of reported Index crimes is shown in Table 12 and Figure 5, and the pattern of changes in Index crime rates per 100,000 persons is shown in Table 13 and Figure 6. Both appear to indicate a leveling off of the number of reported Index crimes and the crime rates.

Most of the other states have experienced a similar growth in reported crime. Counts for 1977 seemed to signify a downturn in crime, but 1978 and 1979 statistics indicate that crime rates rose again. It appears that in 1980 this increase in the number of reported crimes and the crime rates began leveling off. Georgia's rate of increase for the period 1976-1980 was 11.8 percent as compared to the South's rate of 16.5 percent and the national rate of 12.0. (See Tables 14 and 15.)

Table 12

CHANGES IN NUMBERS OF REPORTED INDEX CRIMES, GEORGIA, 1976-1980

Type of Crime	1976	1977	1978	1979	1980	1976 1980

(% Change)	(17.5)	(-15.8)	(14.0)	(16.7)	(6.0)	(18.8)
Motor vehicle theft	15,888	15,036	18,126	21,304	19,891	
(% Change)	(-4.5)	(-5.4)	(20.6)	(17.5)	(-6.7)	(25.2)
*Arson					1,189	
(% Change)	----------	----------	----------	----------	----------	(--------)
Total property crime	218,002	192,795	218,028	248,641	263,975	
(% Change)	(4.9)	(-11.6)	(13.1)	(14.0)	(6.2)	(21.0)
Total index crime	239,032	214,998	242,573	277,235	293,778**	
(% Change)	(4.9)	(-10.1)	(12.8)	(14.3)	(5.9)	(22.9)**

*Atlanta Police Department does not report Arson offenses to the Georgia Crime Information Center.

**A portion of the increase in the percent change from 1979 to 1980 in total Index crime is due to the inclusion of Arson as a Part I Offense for the first time. If Arson were excluded, the percent change would be 5.5%. The percent change from 1976 to 1980 would be 22.4%.

(Source: Georgia Crime Information Center)

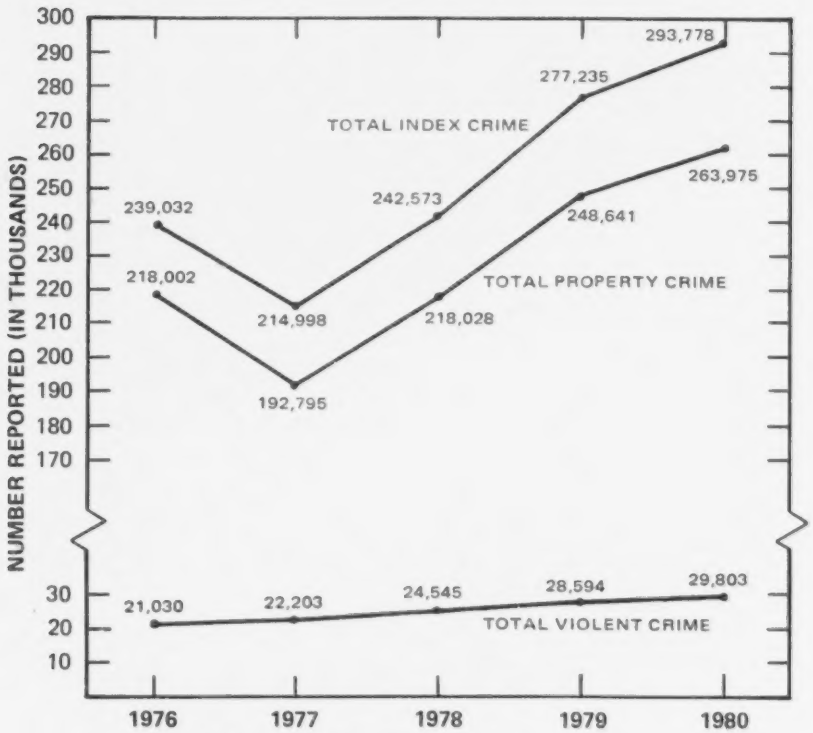
The most significant differences between Georgia, the South, and the nation occurred in the number of reported murders and forcible rapes during the period 1976-1980. The percentage increase in murders reported between 1976-1980 was 13.0 percent for Georgia and 22.6 percent for the nation as a whole. The percentage increase in forcible rapes reported between 1976-1980 was 102.6 percent for Georgia and 44.7 percent for the nation as a whole. (See Table 16.)

Changes in Crime Rates

Changes in crime rates must be interpreted with the understanding that they are population dependent, the product of both changes in the number of crimes reported and changes in population. An increase or decrease in population may have greater impact on the crime rate than a change in the number of reported crimes. For example, a large increase in crime will be offset by a proportionately larger increase in population, producing a decrease in crime rate over the previous time period. (See Table 17.)

FIGURE 5

Five-Year Trend in Numbers of Reported Index Crimes, Georgia, 1976-1980



(Source: Georgia Crime Information Center)

Seriousness of Crime

Although expressing the number of crimes committed as rates per 100,000 population provides some indication of the proportion of persons affected by crime, this approach is not always satisfactory or appropriate. For example, since persons under 15 years of age are not usually among the victims of Index crime, the actual seriousness of crime may be better expressed in terms of the number of potential victims, i.e., persons 15 years of age and older. Of course, crime rates based on such "risk populations" are higher than their corresponding standard rates because of the smaller division (see Table 18).

Section II
ARRESTS: TRENDS, CHARACTERISTICS, COMPARISONS

Numbers and rates of arrests are useful as measures of law enforcement activity and the official response to crime. Of course, the policies and emphasis of law enforcement agencies influence the volume and type of arrests made, but arrest practices for serious crimes are relatively uniform, allowing comparisons over time. It should be noted that because the same person can be arrested more than once during a year, annual arrest statistics do not reflect the number of persons taken into custody that year; rather they indicate the number of arrests made. Arrest statistics also provide some insight into the makeup of the criminal population, particularly in terms of the age, sex, and race of offenders.

The arrest data shown here reflect the actual number of arrests reported, not necessarily all those that took place.

ARREST TRENDS

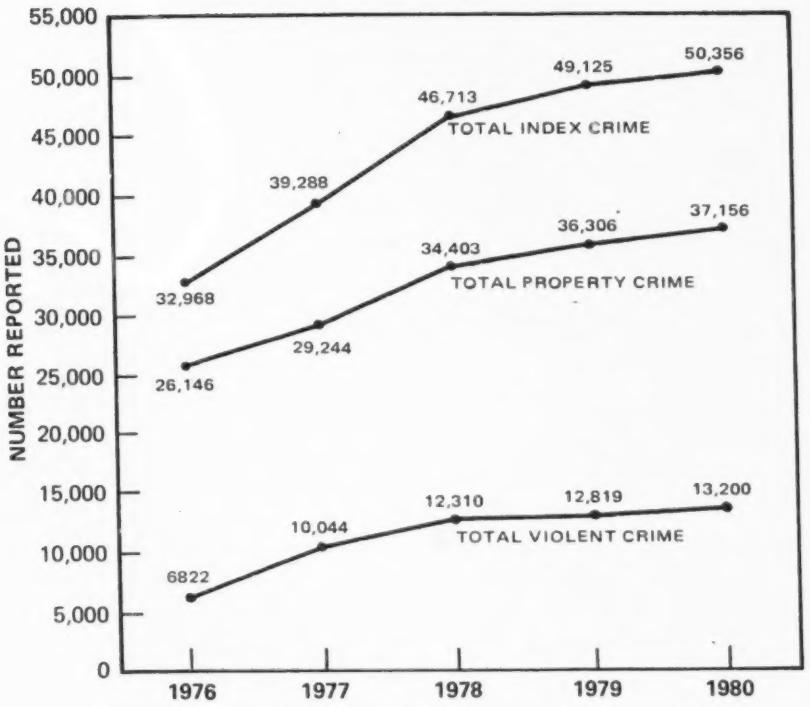
During the period 1976-1980 the number of arrests made by Georgia's law enforcement agencies for Index crimes rose 52.7 percent, more than twice the rate of increase in the number of reported Index crimes. The number of arrests increased in all categories, particularly those for violent crimes (see Table 19 and Figure 8). Still, arrests are only made for a relatively small portion of reported crimes, 17.1 percent overall (see Table 20).

PROFILE OF PERSONS ARRESTED

Generally, young people aged 15-24 are arrested most frequently for Index crimes, with the exceptions of murder and aggravated assault, which normally result in arrests of people over 35 years of age. Males are arrested more frequently than females, and non-whites generally

FIGURE 8

Five-Year Trend in Numbers of Reported Arrests, 1976-1980



(Source: Georgia Crime Information Center)

more frequently than whites. See Table 21 for a profile of persons arrested in 1980, Table 22 for arrest rates by age, sex, and race for 1980, and Table 23 for arrest rates for 1971-1980. Table 24 gives number of arrests for Index crimes, 1971-1980, by age group.

Table 19
CHANGES IN NUMBERS OF REPORTED ARRESTS, 1976-1980

Type of Crime	1976	1977	1978	1979	1980	1976 / 1980
Murder	458	578	685	764	611	(33.4)
(% Change)	(-7.7)	(26.2)	(18.5)	(11.5)	(-20.0)	
Forcible rape	384	683	826	860	875	(127.8)
(% Change)	(16.2)	(77.9)	(20.9)	(4.1)	(1.7)	
Robbery	1,977	2,190	2,723	2,884	2,764	(39.8)
(% Change)	(-21.1)	(10.8)	(24.3)	(5.9)	(-4.1)	
Aggravated assault	4,003	6,593	8,076	8,311	8,950	(123.6)
(% Change)	(-2.9)	(64.7)	(22.5)	(2.9)	(7.7)	
Total violent crime arrests	6,822	10,044	12,310	12,819	13,200	(93.4)
(% Change)	(-10.0)	(47.2)	(22.6)	(4.1)	(3.0)	
Burglary	7,477	8,717	10,534	10,243	10,976	(46.8)
(% Change)	(-10.1)	(16.6)	(20.8)	(-2.8)	(7.1)	
Larceny	16,826	18,401	21,202	23,222	23,346	(38.7)
(% Change)	(-.7)	(9.4)	(15.2)	(9.5)	(.5)	
Motor vehicle theft	1,843	2,126	2,667	2,841	2,543	(38.0)
(% Change)	(-14.9)	(15.4)	(25.4)	(6.5)	(-10.5)	
Arson	----------	----------	----------	----------	291	(-------)
(% Change)					----------	
Total property crime arrests	26,146	29,244	34,403	36,306	37,156	(42.1)
(% Change)	(-4.7)	(11.8)	(17.6)	(5.5)	(2.3)	
Total index crime arrests	32,968	39,288	46,713	49,125	50,356*	(52.7)*
(% Change)	(-5.8)	(19.2)	(18.9)	(5.2)	(2.5)	

*A portion of increase in the percent change from 1979 to 1980 in total Index crime is due to the inclusion of Arson as a Part I Offense for the first time. If Arson were excluded, the percent change would be 1.9% and the percent change from 1976 to 1980 would be 51.8%.

Section III
PUBLIC REACTION

The impact of crime is not limited to those people who are victimized; the fear of becoming a victim is widely held.

In response to their perceptions of crime, many people have begun to develop behaviors, beliefs, and attitudes for avoiding victimization and for coping with fear. These actions can be classified generally as avoidance and as protective and collective response behaviors. Avoidance behavior most typically includes actions believed to decrease exposure to crime situations, such as refusing to go to certain areas or places believed to be high risk areas, e.g., avoidance of central cities at night. A 1977 survey in Michigan found that 66 percent of the respondents stated that there were places they would not go because of crime. While avoidance behavior is practiced by many people, it is particularly prevalent among women and the elderly. Various victimization surveys have shown that from 69 to 89 percent of elderly persons never go out at night and that their fear of being victimized is a key factor in making this decision. In addition, women and the elderly display patterns of avoiding certain circumstances or situations, such as refusing to talk to strangers and to give directions, crossing the street to avoid crowds, and traveling in pairs. These patterns are reported with greater frequency now than ten years ago. Clearly the public seeks to avoid crime or possible victimization situations. Yet it is possible that these behaviors (i.e., avoidance of persons and places, noninvolvement, and anonymity) will intensify the fear of crime.

The public has also taken protective measures against criminal activity, especially against property offenses. Surveys in major American cities have demonstrated that 40 to 50 percent of households have engaged in "target-hardening" activities in the past few years in response to actual or perceived threat of property crime. Of these actions, the most frequently reported was changing door locks. Other

protective actions include the use of an engraving pencil on property, asking neighbors to watch their dwellings, and the purchase of insurance covering vandalism and theft. These protective behaviors suggest that the public is willing to spend money to protect itself from what is perceived to be a real threat. As people seek to make their homes defensible and secure spaces, they also demonstrate a marked tendency to isolate themselves from outsiders. During the past ten years, national surveys consistently have shown that 84 to 90 percent of households lock their doors, day or night. Although the data are mixed, many persons, especially the elderly, also report they will not open their doors to any strangers.

The subject of gun ownership for defense has received considerable interest in the past ten years. National public opinion surveys and the National Crime Survey have found that approximately 50 percent of the households in this country possess a firearm. Information gathered about firearms possession suggests that while the percent of armed households remains relatively stable, the number of weapons per household is increasing. The rate of handgun ownership (a defensive rather than sporting weapon) among gun-owning households increased approximately 10 percent during the 1970s. This increase may suggest that citizens are becoming more willing to possess a lethal form of defense to protect themselves from a perceived crime threat.

An addition to individual avoidance and protective behaviors, citizens have increasingly begun to join together to make a collective response to crime in the form of neighborhood groups, volunteer programs, and many other types of communal organizations. Although systematic data about this type of response are not available, the apparent success of many community-based crime prevention, detection, and law enforcement assistance programs suggests that people, especially in urban areas where crime rates are highest, have become more willing to take action against crime in their immediate surroundings. These national findings probably represent the experiences of many Georgians.

Section IV
COUNTY CRIME PROFILES

Index crime profiles for counties, shown in Table 27, were developed from 1979 and 1980 reports submitted to the Georgia Crime Information Center by participating law enforcement agencies. County totals are actual numbers; estimates for unreported crime are not included. In addition, some agencies did not consistently submit crime reports for 1979 and 1980 which, in effect, lowered their county's total.

COUNTY RANKINGS

Fulton, DeKalb, Chatham, and Cobb counties accounted for approximately one-half of all the Index crimes reported in Georgia in 1980.

Tables 25 and 26 list Georgia's 159 counties by their rankings in total Index crimes reported and Index crime rates, respectively. Great care should be exercised in any effort to interpret this data due to the existence of disparate reporting processes in some counties. However, the large majority of counties do report to the Georgia Crime Information Center in accordance with established guidelines and thus this data provides a useful and relatively accurate ranking of Index crimes and Index crime rates within the individual counties.

Appendix
DATA ANALYSIS TECHNIQUES

In order to control for population differences, and thus make descriptions and comparisons between jurisdictions and over time more accurate and meaningful, Index crimes and arrests are often expressed as a rate, i.e., specifically, the number of crimes or arrests reported for each 100,000 people.

Formula for calculating crime and arrest rates:

$$\text{Crime (arrest) rate for jurisdiction or group} = \frac{\text{Number of crimes (arrests)}}{\text{Total population of jurisdiction or group}} \times 100{,}000$$

The necessity of controlling for population differences can be seen in the following example. In 1978, Coffin City reported 95 murders, while Pleasantville had 53. On the basis of this fact alone, a casual observer would probably conclude that murder is much more of a problem in Coffin City than Pleasantville, there being twice as many. Such a conclusion would not be accurate, however, because the populations of the two cities were not considered. Suppose that Coffin City has 150,000 people, yielding a murder rate per 100,000 people of 63.3, while Pleasantville's population is only 40,000, producing a murder rate per 100,000 people of 132.5. Clearly, the opposite conclusion is warranted since a murder is twice as likely to happen in Pleasantville as in Coffin City.

Another measure, the annual percent change in the number or rate of Index crimes or arrests, is a comparative statistic useful for identifying trends in yearly data.

Formula for calculating percent change:

$$\text{Percent change over previous year} = \frac{X_2 - X_1}{X_1}$$

Where: X_1 = Number, rate of crimes, arrests in previous year
X_2 = Number, rate of crimes, arrests in present year.

ERRATA SHEET

CRIME IN GEORGIA, JUNE 1982

1. Page 1, 1st paragraph, 5th sentence should read:

   Because of their seriousness, frequency of occurrence, and likelihood of being reported, these crimes are thought of as forming an index of the crime problem, and consequently, these Part 1 offenses, in which arson has been included for the first time in 1980, are known as Index Crimes.

2. Page 18, 2nd paragraph, 3rd sentence should read:

   Minor changes in the Georgia Crime Information Center data storage resulted in a change in the definitions of each geographical category in order to report an accurate geographical distribution of crime for 1980.

3. Page 34. In Table 22, "Arrest Rates per 100,000 Persons by Specific Age, Sex, Race, 1980," the Total Arrest Rate column should read:

Murder	11.2
Forcible rape	16.0
Robbery	50.8
Aggravated assault	163.8
Total violent crime	241.6
Burglary	200.9
Larceny	427.3
Motor vehicle theft	46.5
Arson	5.3
Total property crime	680.1
Total index crime	921.7

4. Page 40. In Table 25, "Ranking of Counties by Number of Reported Index Crimes, 1980," Appling County should fall between Jeff Davis County, 203, and Effingham County, 195, with 201 reported index crimes.

5. Page 41. In Table 26, "Ranking of Counties by Index Crime Rates, per 100,000 Persons, 1980," Appling County should fall between Upson County, 1351, and Lee County, 1284, with a 1291 Index Crime Rate.

6. Page 42. Table 27, "County Crime Profiles," Appling County, 1980, should read:

Index Crimes	Violent Crimes	Property Crimes	Murders	Forcible Rapes	Robberies	Aggravated Assaults	Burglaries	Larcenies	Motor Vehicle Thefts	Arsons
201	12	189	1	0	1	10	73	101	12	3
